

MWS3-5 - MOC 20744 - SECURING WINDOWS SERVER 2016

Categoria: Windows Server 2016

INFORMAZIONI SUL CORSO

				
Durata: 5 Giorni	Categoria: Windows Server 2016	Qualifica Istruttore: Microsoft Certified Trainer	Dedicato a: Professionista IT	Produttore: Microsoft

OBIETTIVI

- Mettere in sicurezza Windows Server.
- Sviluppare applicazioni sicure e un'infrastruttura per il bilanciamento del carico.
- Gestire le baseline della sicurezza.
- Configurare e gestire l'amministrazione just-enough e just-in-time (JIT).
- Gestire la sicurezza dei dati.
- Configurare Windows Firewall e un firewall distribuito software-defined.
- Mettere in sicurezza il traffico di rete.
- Mettere in sicurezza l'infrastruttura di virtualizzazione.
- Gestire il malware e le minacce software.
- Configurare il controllo avanzato della sicurezza.
- Gestire gli aggiornamenti del software.
- Gestire le minacce utilizzando Advanced Threat Analytics (ATA) e Microsoft Operations Management Suite (OMS).

PREREQUISITI

- Aver completato i seguenti corsi 740, 741, e 742, o avere conoscenze equivalenti.
- Avere una solida comprensione e un'esperienza pratica dei fondamenti di rete inclusi: TCP / IP, User Datagram Protocol (UDP) e Domain Name System (DNS).
- Avere un'esperienza pratica dei Servizi di dominio (AD DS) e dei principi di Active Directory.
- Avere un'esperienza pratica dei fondamenti di virtualizzazione Microsoft Hyper-V.
- Comprendere i principi di sicurezza di Windows Server.

CONTENUTI

Module 1: Breach detection and using the Sysinternals tools

Overview of breach detection

Using the Sysinternals tools to detect breaches

Lab : Basic breach detection and incident response strategies

Identifying attack types

Using incident-response strategies

Exploring the Sysinternals tools

After completing this course, students will be able to:

Describe breach detection.

Describe how to detect a breach by using the Sysinternals tools.

Module 2: Protecting credentials and privileged access

Understanding user rights

Computer and service accounts

Protecting credentials

Understanding privileged-access workstations and jump servers

Deploying a local administrator-password solution

Lab : User rights, security options, and group-managed service accounts

Configuring security options

Configuring restricted groups

Delegating privileges

Creating and managing group managed service accounts (MSAs)

Configuring the Credential Guard feature

Locating problematic accounts

Lab : Configuring and deploying LAPs

Installing local administrator password solution (LAPs)

Configuring LAPs

Deploying LAPs

After completing this module, students will be able to:

Understand user rights.

Describe computer and service accounts.

Help protect credentials.

Understand privileged-access workstations and jump servers.

Understand how to use a local administrator-password solution.

Module 3: Limiting administrator rights with Just Enough Administration

Understanding JEA

Configuring and deploying JEA

Lab : Limiting administrator privileges by using JEA

Creating a role-capability file

Creating a session-configuration file

Creating a JEA endpoint

Connecting to a JEA endpoint

Deploying JEA by using Desired State Configuration (DSC)

After completing this module, students will be able to:

Understand JEA.

Configure and deploy JEA.

Module 4: Privileged Access Management and administrative forests

Understanding ESAB forests
Overview of MIM
Implementing JIT and Privileged Access Management by using MIM

Lab : Limiting administrator privileges by using Privileged Access Management

Using a layered approach to security
Exploring MIM
Configuring a MIM web portal
Configuring the Privileged Access feature
Requesting privileged access
After completing this module, students will be able to:
Understand enhanced security administrative environment forests.
Understand MIM.
Understand how to implement JIT and Privileged Access Management by using MIM.

Module 5: Mitigating malware and threats

Configuring and managing Windows Defender
Using software restricting policies (SRPs) and AppLocker
Configuring and using Device Guard
Using and deploying the Enhanced Mitigation Experience Toolkit

Lab : Securing applications by using AppLocker, Windows Defender, Device Guard Rules, and the EMET.

Configuring Windows Defender
Configuring AppLocker
Configuring and deploying Device Guard
Deploying and using EMET
After completing this module, students will be able to:
Configure and manage Windows Defender.
Use Software Restricting Policies and AppLocker.
Configure and use Device Guard.
Use and deploy the EMET.

Module 6: Analysing activity by using advanced auditing and log analytics

Overview of auditing
Understanding advanced auditing
Configuring Windows PowerShell auditing and logging

Lab : Configuring encryption and advanced auditing

Configuring auditing of file-system access
Auditing domain logons
Managing the configuration of advanced audit policies
Windows PowerShell logging and auditing
After completing this module, students will be able to:
Understanding auditing.
Understand advanced auditing.
Audit and log Windows PowerShell.

Module 7: Analysing activity with Microsoft Advanced Threat Analytics feature and Operations Management Suite

Overview of Advanced Threat Analytics
Understanding OMS

Lab : Advanced Threat Analytics and Operations Management Suite

Using ATA and OMS

Preparing and deploying ATA

Preparing and deploying OMS

After completing this module, students will be able to:

Understand Advanced Threat Analytics.

Understand OMS.

Module 8: Securing your virtualization an infrastructure

Overview of Guarded Fabric VMs

Understanding shielded and encryption-supported VMs

Lab : Deploying and using Guarded Fabric with administrator-trusted attestation and shielded VMs

Deploying Guarded Fabric VMs with administrator-trusted attestation

Deploying a shielded VM

After completing this module, students will be able to:

Understand Guarded Fabric VMs.

Understand shielded and encryption-supported VMs.

Module 9: Securing application development and server-workload infrastructure

Using Security Compliance Manager

Introduction to Nano Server

Understanding containers

Lab : Using Security Compliance Manager

Configuring a security baseline for Windows Server 2016

Deploying a security baseline for Windows Server 2016

Lab : Deploying and Configuring Nano Server and containers

Deploying, managing, and securing Nano Server

Deploying, managing, and securing Windows Server containers

Deploying, managing, and securing Hyper-V containers

After completing this module, students will be able to:

Understand Security Compliance Manager.

Describe Nano Server.

Understand containers.

Module 10: Protecting data with encryption

Planning and implementing encryption

Planning and implementing BitLocker

Lab : Configuring EFS and BitLocker

Encrypting and recovering access to encrypted files

Using BitLocker to protect data

After completing this module, students will be able to:

Plan and implement encryption.

Plan and implement BitLocker.

Module 11: Limiting access to file and folders

Introduction to FSRM

Implementing classification management and file-management tasks

Understanding Dynamic Access Control (DAC)

Lab : Configuring quotas and file screening

Configuring FSRM quotas

Configuring file screening

Lab : Implementing DAC

Preparing DAC

Implementing DAC

After completing this module, students will be able to:

Understand FSRM.

Implement classification management and file-management tasks.

Understand DAC.

Module 12: Using firewalls to control network traffic flow

Understanding Windows Firewall

Software-defined distributed firewalls

Lab : Windows Firewall with Advanced Security

Creating and testing inbound rules

Creating and testing outbound rules

After completing this module, students will be able to:

Describe Windows Firewall.

Understand software-defined distributed firewalls.

Module 13: Securing network traffic

Network-related security threats and connection-security rules

Configuring advanced DNS settings

Examining network traffic with Microsoft Message Analyzer

Securing SMB traffic, and analysing SMB traffic

Lab : Connection security rules and securing DNS

Creating and testing connection security rules

Configuring and testing DNSSEC

Lab : Microsoft Message Analyzer and SMB encryption

Using Microsoft Message Analyzer

Configuring and verifying SMB encryption on SMB shares

After completing this module, students will be able to:

Understand network-related security threats and connection security rules.

Configure advanced DNS settings.

Examine network traffic with Microsoft Message Analyzer.

Secure SMB traffic, and analyze SMB traffic.

Module 14: Updating Windows Server

Overview of WSUS

Deploying updates by using WSUS

Lab : Implementing update management

Implementing the WSUS server role

Configuring update settings

Approving and deploying an update by using WSUS

Deploying Windows Defender definition updates by using WSUS

After completing this module, students will be able to:

Understand WSUS.

Deploy updates with WSUS.

INFO

Esame: 70-744 - Securing Windows Server 2016

Manuale: Il Materiale Didattico Ufficiale per tutti i corsi Microsoft MOC può essere richiesto, se disponibile, in forma elettronica (DMOC) invece che cartacea e lo studente iscritto potrà scaricarlo dal sito Microsoft. Chi acquista un DMOC ha diritto a consultare tutte le versioni del manuale, sia quelle precedenti a quella che acquista sia quelle che usciranno successivamente, dove troverà corretti eventuali errori e/o le novità del prodotto.

Prezzo manuale: 250 € incluso nel prezzo del corso a Calendario

Natura del corso: Operativo (previsti lab su PC)
