ODAT-18 - ORACLE AI DATABASE: RAC ADMINISTRATION WORKSHOP

Categoria: **Database**

INFORMAZIONI SUL CORSO

Durata:	Categoria:	Qualifica Istruttore:	Dedicato a:	Produttore:
5 Giorni	Database	Oracle Certified Professional	Professionista IT	Oracle

OBIETTIVI

In this course, learners will understand the architecture and components of Oracle RAC, apply their knowledge to install, configure, and manage RAC databases, analyze performance and availability challenges through monitoring and tuning, evaluate strategies for backup, recovery, and patching to maintain business continuity, and finally create highly available, scalable, and optimized RAC environments by implementing advanced features such as RAC One Node, In-Memory Column Store, Multitenant architecture, and Quality of Service management & skills that directly enhance their ability to ensure continuous operations and meet the demands of enterprise-level database environments.

PREREQUISITI

Aver seguito il corso Oracle Database Administration o avere conoscenze equivalenti

CONTENUTI

1: Grid Infrastructure:Overview

- -Cluster 1-3
- -Clusterware 1-4
- -Oracle Clusterware 1-5
- -Clusterware Architecture and Cluster Services 1-6
- -Features of Oracle Clusterware 1-7
- -Oracle Clusterware Networking 1-8
- -Oracle Clusterware Initialization 1-11
- -GPnP Architecture: Overview 1-12
- -How GPnP Works: Cluster Node Startup 1-15
- -GPnP Architecture: Overview 1-24
- -Client Database Connections 1-26
- -Cluster-Aware Storage Solutions 1-27
- -Oracle ASM 1-29
- -ASM Features and Benefits 1-30
- -Oracle ACFS 1-32
- -Oracle Flex ASM 1-33

-Oracle RAC: Overview 1-34
-Typical Oracle RAC Architecture 1-35
-Oracle RAC One Node 1-36
-Oracle RAC One Node and Oracle Clusterware 1-37
-Oracle RAC and Network Connectivity 1-38
-Parallel Execution with RAC 1-40
-Necessity of Global Resources 1-43
-Benefits of Using RAC 1-44
-Clusters and Scalability 1-46
-Scalability 1-47
-Vertical Scalability 1-48
-Horizontal Scalability 1-49
-Speedup/Scaleup and Workloads 1-51
-I/O Throughput Balanced: Example 1-52
-Summary 1-53

2: Installing and Configuring Oracle RAC
-Objectives 2-2
-Installing the Oracle Database Software 2-3
-Creating Oracle RAC Database with DBCA 2-11
-Database Type Selection 2-12
-Database Identification 2-14
-Storage Options 2-15
-Database Content 2-16
-Configuration Options 2-17
-Cluster Database Management Options 2-18
-Passwords for Database Schema Owners 2-19
-Create the Database 2-20
-Monitoring Progress 2-22
-Postinstallation Tasks 2-23
-Background Processes Specific to Oracle RAC 2-24
-Single Instance-to-RAC Conversion 2-26
-Converting Databases to Oracle RAC 2-27
-Single-Instance Databases: Other Items 2-28
-Scenario 1: Converting Single Instance on a Single Server to RAC 2-29
-Step 1: Create an Image of the Single-Instance Database 2-30
-Example: Result of Step 1 2-31
-Step 2: Create an Oracle Cluster for RAC 2-32
-Example: Result of Step 2 2-33
-Step 3: Copy the Preconfigured Database Image 2-34
-Example: Database Structure File (*.dbc) 2-35
-Example: Result of Step 3 2-36
-Step 4: Create an Oracle RAC Database 2-37
-Scenario 2: Converting Single Instance on a Cluster to RAC 2-38
-Check the Database Type 2-39
-Steps to Convert a Single-Instance Database on a Cluster 2-40
-Automated Conversion Procedure Using Oracle DBCA 2-41

3: Oracle RAC Administration
-Objectives 3-2
-Oracle RAC and Multitenant Architecture 3-3
-Adding a PDB to a RAC CDB 3-5
-Dropping a PDB from a RAC CDB 3-6
-Redo Log Files and RAC 3-7
-Automatic Undo Management and RAC 3-9
-Local Temporary Tablespaces 3-10
-Local Temporary Tablespace Organization 3-11
-Temporary Tablespace Hierarchy 3-12
-Local Temporary Tablespace Considerations 3-13
-Managing Local Temporary Tablespaces 3-14
-Local Temporary Tablespace Dictionary Views 3-15
-Starting and Stopping RAC Instances 3-16
-Starting and Stopping RAC Instances with srvctl 3-17
-Starting and Stopping RAC Instances with SQL*Plus 3-18
-RAC Initialization Parameter Files 3-19
-SPFILE Parameter Values and RAC 3-20
-Manage RAC with SQL Developer 3-21
-SQL Developer and SPFILE Parameter Values 3-22
-Parameters That Require Identical Settings 3-25
-Parameters That Require Unique Settings 3-26
-Quiescing RAC Databases 3-27
-Terminating Sessions on a Specific Instance 3-28
-How SQL*Plus Commands Affect Instances 3-29
-Transparent Data Encryption and Keystores in RAC 3-30
-Summary 3-32

4: Administering Pluggable Databases in Oracle RAC
-Objectives 4-2
-Opening a PDB in a RAC CDB 4-3
-Closing a PDB in a RAC CDB 4-4
-Simplified Database Deployment 4-5
-Automatic PDB Resource Management 4-6
-Pluggable Database Placement 4-7
-PDB Placement Choice: Fill or Spread 4-8
-Ranking and CPU 4-9
-Rank and CPU: Startup Order 4-10
-Failure Handling 4-11
-Last Node Standing 4-12
-Configuring a PDB with Cardinality and Rank: Example 4-13
-Summary 4-15

5: Upgrading and Patching Oracle RAC
-Objectives 5-2
-Patch and Patch Set: Overview 5-3
-Types of Patches 5-4
-Patch Download Assistant 5-5

-RAC Patching Methods 5-8
-Key Considerations for RAC Patching 5-9
-Out-of-Place Upgrades with OUI 5-10
-Rolling Patches 5-13
-OPatch: Overview 5-14
-OPatch: General Usage 5-15
-Before Patching with OPatch 5-16
-Installing a Rolling Patch with OPatch 5-17
-OPatch Automation 5-19
-OPatch Automation: Examples 5-20
-OPatch Log and Trace Files 5-22
-Queryable Patch Inventory 5-23
-Alternative Methods of Patching 5-24
-Single-Server Rolling Database Maintenance: Overview 5-25
-Local Rolling Database Maintenance: Overview 5-26
-Patching Oracle RAC Database in Local Rolling Mode: Example 5-27
-Oracle RAC Two-Stage Rolling Patches: Overview 5-29
-Summary 5-30

6: Managing Backup and Recovery for RAC
-Objectives 6-2
-Buddy Recovery for Reconfiguration 6-4
-Smooth Reconfiguration 6-5
-Instance Recovery and RAC 6-6
-Protecting Against Media Failure 6-7
-Media Recovery in Oracle RAC 6-8
-Parallel Recovery in RAC 6-9
-RAC and the Fast Recovery Area 6-10
-RAC Backup and Recovery Using SQL Developer 6-11
-Configuring RAC Backup Settings with SQL Developer 6-12
-Configure Fast Recovery Area Using SQL Developer 6-13
-Oracle Recovery Manager 6-14
-Configuring RMAN Snapshot Control File Location 6-15
-Configuring Control File and SPFILE Autobackup 6-16
-Cross-checking on Multiple RAC Clusters Nodes 6-17
-Channel Connections to Cluster Instances 6-18
-RMAN Channel Support for the Grid 6-19
-RMAN Default Autolocation 6-20
-Distribution of Backups 6-21
-View Archive Logs in SQL Developer 6-22
-Configure Archive Log Format 6-23
-Archived Redo File Conventions in RAC 6-24
-Managing Archived Redo Logs Using RMAN 6-25
-Noncluster File System Local Archiving Scheme 6-26
-Configuring Noncluster, Local Archiving 6-27
-ASM and Cluster File System Archiving Scheme 6-28
-Configuring the CFS Archiving Scheme 6-29
-Restoring and Recovering 6-30

-Summary 6-31

7: Global Resource Management Concepts
-Objectives 7-2
-Need for Global Concurrency Control 7-3
-Global Resource Directory (GRD) 7-5
-Global Resource Management 7-7
-Global Resource Remastering 7-9
-Global Resource Recovery 7-11
-PDB and Service Isolation 7-13
-Global Resource Management Related Background Processes 7-14
-Global Resource Access Coordination 7-15
-Global Enqueues 7-16
-Instance Locks 7-17
-Global Cache Management: Overview 7-18
-Global Cache Management Components 7-19
-Global Cache Buffer States 7-20
-Global Cache Management Scenarios for Single Block Reads 7-21
-Global Cache Scenarios: Overview 7-22
-Scenario 1: Read from Disk 7-23
-Scenario 2: Read-Write Cache Fusion 7-27
-Scenario 3: Write-Write Cache Fusion 7-31
-Scenario 4: Write-Read Cache Fusion 7-35
-Global Cache Management Scenarios for Multiblock Reads 7-39
-Useful Global Resource Management Views 7-40
-Summary 7-41

8: RAC Database Monitoring and Tuning
-Objectives 8-2
-CPU and Wait Time Tuning Dimensions 8-3
-RAC-Specific Tuning 8-4
-RAC Tuning Tools 8-5
-Analyzing Cache Fusion Impact in RAC 8-6
-Typical Latencies for RAC Operations 8-7
-Wait Events for RAC 8-8
-Wait Event Views 8-9
-Global Cache Wait Events: Overview 8-10
-Global Enqueue Waits 8-12
-Session and System Statistics 8-13
-Most Common RAC Tuning Tips 8-14
-Index Block Contention: Considerations 8-16
-Sequence Usage in Oracle RAC 8-17
-Oracle Sequences and Index Contention 8-18
-Ordered Sequence Enhancement in Oracle RAC 23ai 8-20
-Ordered Sequence Optimization in 19c: Example 8-21
-Ordered Sequence Optimization in 23ai: Example 8-22
-Undo Block Considerations 8-23
-High-Water Mark Considerations 8-24

-Concurrent Cross-Instance Calls: Considerations 8-25
-Monitoring RAC Database and Cluster Performance Using SQL-Developer 8-26
-Review the Instance Operations Using Instance Viewer 8-27
-Viewing Connected Sessions CPU and Time Statistics 8-28
-Viewing the Cluster Waits 8-29
-Viewing Other Waits 8-30
-Monitoring RAC Database and Cluster Performance Using EM 8-31
-AWR Snapshots in RAC 8-32
-AWR Reports and RAC: Overview 8-33
-Active Session History Reports for RAC 8-34
-Automatic Database Diagnostic Monitor for RAC 8-35
-What Does ADDM Diagnose for RAC? 8-37
-SQL-Developer Support for ADDM for RAC 8-38
-Summary 8-39

9: Managing High Availability of Services
-Objectives 9-2
-Managing PDB Services 9-3
-Affinitizing PDB Services 9-5
-Oracle Services 9-6
-Service Usage in an Oracle RAC Database 9-7
-Parallel Operations and Services 9-8
-Service-Oriented Buffer Cache Access 9-9
-Service Characteristics 9-10
-Default Service Connections 9-12
-Restricted Service Registration 9-13
-Managing Services with Enterprise Manager 9-15
-Creating Services with SRVCTL 9-16
-Managing Services with srvctl 9-17
-Managing Services with SQL Developer 9-18
-Oracle RAC Connection Management: Overview 9-19
-Using Services with Client Applications 9-20
-Services and Connection Load Balancing 9-21
-Services and Connection Load Balancing Goals 9-22
-Distribute Connections Based on Service Attribute 9-23
-Load Balancing Options in Oracle RAC: Example 9-25
-Performance Considerations 9-26
-Smart Connection Rebalance 9-27
-Testing Smart Connection Rebalance: Example 9-28
-Outcome Without Smart Connection Rebalance: Example 9-29
-Outcome with Smart Connection Rebalance: Example 9-30
-Using Services with the Resource Manager 9-31
-Using Services with the Scheduler 9-32
-Managing Scheduler Job Classes Using SQL Developer 9-33
-Scheduler Jobs Attribute “Stickiness” 9-34
-Using Distributed Transactions with RAC 9-35
-Distributed Transactions and Services 9-37
-Services and Transparent Application Failover 9-39

-Service Thresholds and Alerts 9-40
-Services and Thresholds Alerts: Example 9-41
-Validating Service Alert Thresholds: Example 9-42
-Service Aggregation and Tracing 9-43
-Service Aggregation Configuration 9-44
-Service, Module, and Action Monitoring 9-45
-Service Performance Views 9-46
-Summary 9-47

10: High Availability for Applications
-Objectives 10-2
-Transaction Guard and Application Continuity 10-3
-What Is Transaction Guard? 10-4
-How Transaction Guard Works 10-5
-Using Transaction Guard 10-6
-Creating Services for Transaction Guard 10-8
-What Is Application Continuity? 10-9
-How Does Application Continuity Work? 10-10
-RAC and Application Continuity 10-11
-Using Application Continuity 10-12
-Creating Services for Application Continuity 10-14
-What Is Transparent Application Continuity? 10-16
-How Does Transparent Application Continuity Work? 10-18
-Session State 10-20
-Dynamic Session State Consistency 10-22
-Creating TAC-Enabled Service 10-24
-Application Continuity and Transparent Application Continuity 10-25
-Summary 10-27

11: AI Vector Search Overview
-Objectives 11-2
-Vector Data Type 11-3
-Vector Embeddings 11-4
-Similarity Search 11-5
-Exact Similarity Search 11-6
-Vector Distance Operand 11-7
-Approximate Similarity Search 11-8
-Multivector Similarity Search 11-9
-Comparison 11-10
-Vector Indexes 11-12
-Why do we need Vector Indexes? 11-13
-In-Memory Neighbor Graph Vector Index (HNSW) 11-14
-Neighbor Partition Vector Index (IVF) 11-15
-Vector Pool 11-16
-Creating a Basic Vector Index 11-17
-Comparison 11-18
-Using Vector Indexes 11-19
-Best Practices 11-20

-RAG Workloads on Oracle RAC 11-21
-Deploy AI Vector Search Workloads on Oracle RAC 11-22
-Benefit from AI Vector Search with Business Data to Leverage AI/ML 11-23
-AL/ML and Vector Workloads on Oracle RAC 11-24
-AL/ML and AI Vector Search with Oracle RAC 11-25
-Seamlessly Integrate AI Vector Search on Business Data 11-26
-Summary 11-27

INFO

Materiale didattico: Materiale didattico ufficiale Oracle in formato digitale
Costo materiale didattico: incluso nel prezzo del corso a Calendario
Natura del corso: Operativo (previsti lab su PC)
