BLOC-4 - BLOCKCHAIN DEVELOPING ON ETHEREUM

Categoria: **Blockchain**

INFORMAZIONI SUL CORSO

Durata:	Categoria:	Qualifica Istruttore:	Dedicato a:	Produttore:
3 Giorni	Blockchain	Docente Senior (min. 5 anni)	Sviluppatore	PCSNET

OBIETTIVI

Al termine del corso i partecipanti saranno in grado di:

-Approfondire i benefici e svantaggi delle tecnologie Blockchain
-Scrivere e leggere Smart Contract sicuri utilizzando il linguaggio Solidity
-Comprendere il concetto di Gas e come viene calcolato il suo costo
-Comprendere come sono strutturate le transazioni
-Comprendere ed evitare bug costosi ed errori di programmazione
-Creare applicazioni che interagiscono con gli Smart Contract
-Web3.js
-Installare, configurare e usare il framework Truffle
-Scrivere test con il framework Truffle
-Comprendere il workflow di sviluppo e deployment
-Utilizzare e creare private network, test network and the public main network

PREREQUISITI

Ènecessario avere una conoscenza di base di JavaScript e HTML.
Èconsigliato avere una conoscenza di base di C ++ o Java, data types, git repositories.

CONTENUTI

Module 1 - Blockchain and Smart Contract Basics

-What is Blockchain and how does it work?
-Centralized vs. Decentralized vs. Distributed
-Blockchain vs. Databases
-Bitcoin vs Ethereum
-What are Smart Contracts?
-How are Smart Contracts used?

Module 2 - Smart Contract Programming Basics

-Advantages and Drawbacks of Smart Contracts
-High-Level Language vs. Low-Level

- -Smart Contracts with Solidity
- -Types of Variables in Solidity
- -Function/Variable Visibility
- -Smart Contract Constructors
- -Setter- and Getter-Functions

Module 3 - Understanding Decentralized Information and Web3

- -Blockchain Access structures and Architectures
- -Blockchain Access vs. centralized RESTful API
- -Understanding Web3.js API
- -Understanding Transactions and Consensus
- -Private Keys, Public Keys and Signatures
- -Understanding privacy on pubic Blockchains
- -Understanding the architecture of KeyStore’s such as MetaMask or MIST

Module 4 - Basics of Ethereum and the EVM

- -Ethereum Denominations
- -Understanding EVM and the ABI Interface
- -Calls vs. Transactions
- -Concurrency and Events
- -Use cases of Events
- -LAB:
  - -Install and Use Ganache
  - -Work with Web3.js
  - -Define Events
  - -Listen and React to Events

Module 5 - Solidity Advanced: Modifiers, Mappings, Structs and Inheritance

- -Understanding Functions, Mappings and Structs
- -When to use Modifiers
- -Libraries vs. Inheritance
- -Understand and use Modifiers
- -Add Mappings and Structs
- -Use Inheritance to increase auditability

Module 6 - Understanding Deployment and Costs

- -Understand Development and Deployment Cycles
- -Understanding Solidity Compilation and Deployment
- -Gas and Gas-Costs
- -Upgradeability and Data Migration Techniques
- -Understand the moving Parts: Compiler, Blockchain, API, KeyStore

Module 7 - Mining, Proof of Work vs. Proof of Authority

- -What is Mining in PoW?
  - -How blocks are generated
  - -PoW vs. PoA (vs. PoS)
- -Understanding Go-Ethereum or Ganache/TestRPC for local development
- -Understanding Private Blockchains vs. Public Blockchains
- -LAB:

- -Installing and using Ganache
- -Installing and using Go-Ethereum
- -Connecting to Ganache/Go-Ethereum from Remix and Web3.js
- -Interact with the Blockchain from HTML/JS

Module 8 - Working in Teams, Testing and Versioning

- -Understanding what Truffle is
- -How Manage Code for Teams
- -Understanding Migrations
- -Understanding Unit-Testing with Truffle
- -LAB:
  - -Download and Setup Truffle
  - -Adapt the standard Truffle-Project
  - -Write A Unit Test

INFO

Esame: CBDE - Certified Blockchain Developer Ethereum
Materiale didattico: Materiale didattico in formato digitale
Costo materiale didattico: incluso nel prezzo del corso a Calendario
Natura del corso: Operativo (previsti lab su PC)
