VEAM-1 - VBRCMR_V12 - VEEAM BACKUP & REPLICATION V12.1: CONFIGURE, MANAGE AND RECOVER

Categoria: **Veeam**

INFORMAZIONI SUL CORSO

Durata:	Categoria:	Qualifica Istruttore:	Dedicato a:	Produttore:
4 Giorni	Veeam	Veeam Certified Trainer	Professionista IT	Veeam

OBIETTIVI

After completing this course, attendees will be able to:

- Describe Veeam security concepts
- Given a scenario, configure a backup job and a backup copy job
- Explain network-attached storage (NAS) backups and configuration
- Describe Veeam's replication capabilities
- Determine appropriate use case for backups, replicas and/or continuous data protection
- Configure backup infrastructure components, including proxy and repository servers
- Given a scenario, evaluate when and how to apply immutability settings
- Given a scenario, recover data from backups

PREREQUISITI

Students should have fundamental IT experience working with networking, servers, storage, cloud, virtualization and operating systems.
To get the most out of this course, students should be familiar with the core fundamental concepts of Veeam Backup & Replication through hands-on experience.

CONTENUTI

Data protection strategies
Review of key data protection strategies that ensure the safety of your data.

Analysis of risks to data
Explore different risk scenarios, what risks do we face daily within our environment?

What is protected?
Review of Veeam Data Platform and introduction to the class scenario.

Security and protection considerations
Describe strategies and tools to secure the Veeam backup server to avoid unauthorized access and data leaks.

Protecting workloads
Efficiently protect VMware and Hyper-V virtual machines based on well-defined SLAs through the creation of backup jobs.

Deploying agents
Identify the use of protection groups to automate the installation of Veeam Agents and protecting workloads with agent backup jobs.

Unstructured data backup
List required components and features available to protect unstructured data.

Optimizing your backups
Analyze features and settings that allow backup storage optimization, faster backups and data consistency.

Immutability and hardened repositories
Describe backup data protection mechanisms to avoid premature deletion and unwanted modifications. Identify characteristics and deployment steps of Linux Hardened Repositories to achieve backup data immutability.

Backup infrastructure optimization
List deployment options and additional settings to improve general backup solution performance.

Replication
Describe use cases, architectures and features of replication jobs and continuous data protection (CDP) policies.

Backup copy jobs
Ensure recoverability and adhere to the 3-2-1 Rule with backup copy jobs.

Long-term retention
List different mechanisms for data archiving, including grandfather-father-son retention policies.

Scale-out Backup Repository™
Describe architecture, placement policies, data tiers and management of Scale-out Backup Repositories.

Move and copy backups with VeeaMover
Identify use cases for virtual machine and backup migrations with VeeaMover.

Recovery verification
Create automated tests to ensure recoverability from backups and replicas.

Veeam Backup Enterprise Manager
Describe the use cases for Veeam Backup Enterprise Manager.

Incident Response Planning
Integrating Veeam Backup and Replication into your incident response plan.

Advanced recovery features
Explore some more in-depth recovery features of Veeam Backup and Replication.

Selecting the ideal recovery method
What are the implications of different recovery methods and selecting the correct recovery method.

Enacting a recovery
Get practice in recovering different recovery types with a variety of data types.

Esame: VMCE - Veeam Certified Engineer

Materiale didattico: Materiale didattico ufficiale Veeam in formato digitale

Costo materiale didattico: incluso nel prezzo del corso a Calendario

Natura del corso: Operativo (previsti lab su PC)
